Data Analyst
Brussel

Detail vacature

Functie

With the rise in data availability and our continual quest to improve our performance and quality, we are increasingly using big data and modern machine-learning as an integral part of our operational processes. In this context, we are seeking a Data Analyst.

Responsibilities:
• Employ advanced data analysis techniques to bring together theoretical and actual information and gain complex insights
• Collaborate closely with cross-functional project teams to contribute to ongoing improvements.
• Develop a thorough understanding of the clients processes
• Translate complex data findings into clear understandings and presentations for both technical and non-technical stakeholders.

Qualifications and Skills:
• Strong problem-solving skills, with a natural curiosity and attention to detail
• A proactive analytical mindset with the drive to challenge and continually improve existing processes
• Proficiency in Python for data manipulation, analysis, modelling and visualisation.
• Proficiency in statistics
• Proficiency in English and ideally Dutch or French
• Basic understanding of SQL for data retrieval and manipulation.
• Nice to have: Familiarity with machine learning concepts

Work Environment: Join a dynamic project-based team that acts as a bridge between operations, business and IT functions. Experience a varied work routine that contributes to larger organizational goals, collaborating closely with a dedicated team. Initial onboarding will take place at our office locations, transitioning to a hybrid setup as you become an integral part of the team.
